GXBank

UTM × HACKATHON 2025

GX.AI Context Engine

Intelligent banking. Automated habits. Real-time insights.

Muhammad Ikhwan bin Sulaiman
UiTM Shah Alam
Let me solo it

AI

THE PROBLEM

Banking dashboards are built for banks — not for people.

01

Passive data display

You see numbers. You get no advice on what to do next.

02

Reactive notifications

Alerts fire after overspending — never before.

03

Zero financial coaching

No intelligence linking your habits to your goals.

73%

of Malaysians report difficulty tracking spending across multiple categories

Source: Bank Negara Financial Literacy Survey

OUR SOLUTION

An AI-powered web dashboard that thinks like a financial advisor.

Real-Time Balance View

Full account overview with live salary detection and spend tracking

Smart Transaction Feed

Categorised history with colour-coded income vs. spend

GX.AI Context Engine

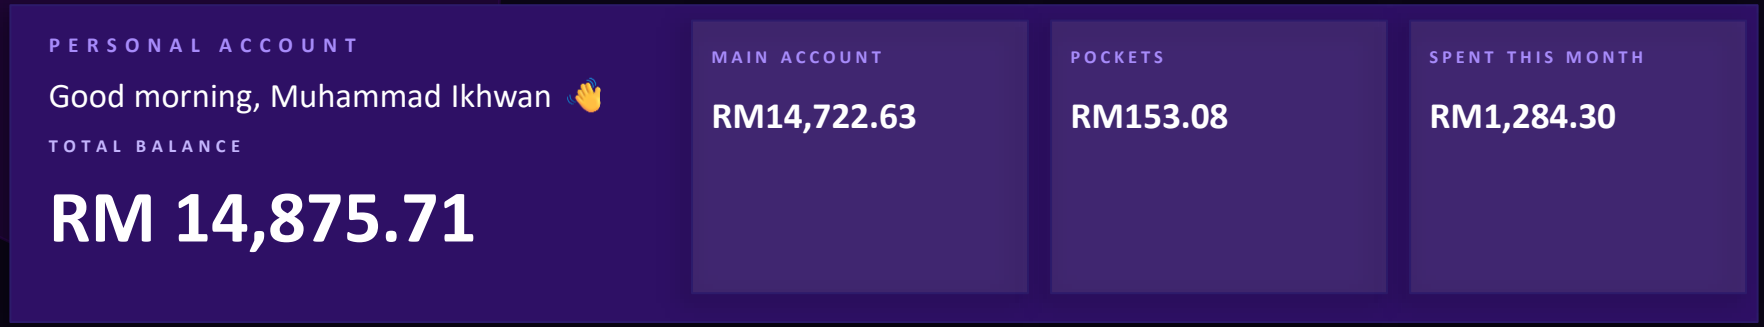

Automated nudges, audits, and salary routing powered by AI

Spending Breakdown

Visual category bars updated in real time every session

THE DASHBOARD

Built. Deployed. Running at localhost:3000.

Real transaction feed with categories

The brain of the dashboard.

V1

Function 01 — Analyse Weekend

Detects high-velocity weekend spending and auto-diverts funds to an Emergency Pocket before your streak breaks.

V2

Function 02 — Audit Subscriptions

Scans for dormant subscriptions and queues cancellation, redirecting savings to a High-Yield Pocket at 3.55% p.a.

V3

Function 03 — Auto-Salary Route

On salary detection, instantly locks 20% into Pockets and logs your streak. Fully automated, zero manual steps.

gx.ai — neural_context_engine v2.4.1

> GX.AI Neural Sync established.

> Analyzing Data Vector: [Salary]...

✦ GX_AUTO — Salary inflow: RM3,000. Auto-routing 20% (RM600) into High-Yield Pockets. Streak: 4 months.

> Analyzing Data Vector: [Audit]...

✦ GX_AUDIT — 3 dormant subscriptions found (RM85/mo). Cancellation queued.

TECHNOLOGY STACK

Modern stack. Production-ready architecture.

FRONTEND

- Next.js 14 (App Router)
- TypeScript
- Tailwind CSS
- Framer Motion

UI DESIGN

- GXBank brand palette
- Glassmorphism cards
- SVG Heroicons
- Custom scrollbars

AI LAYER

- Anthropic Claude API
- Context-aware prompts
- Real-time streaming
- Vector scenarios

DEV & DEPLOY

- Vercel (deployment)
- ESLint + Prettier
- Component-based arch
- Hot reload (Turbo)

IMPACT & ROADMAP

What this becomes at scale.

3	<2s	RM85	20%
AI Vectors Deployed	AI Response Time	Monthly savings identified	Auto savings rate locked

ROADMAP

- **Phase 1 ✓** — Core dashboard + GX.AI Engine (done today)
- **Phase 2** — Live API integration with GXBank transaction data
- **Phase 3** — Personalised ML model trained on spending history
- **Phase 4** — Mobile PWA + push notifications for real-time nudges

GX

GX.AI Context Engine

Thank you!

Intelligent. Automated. Beautiful.
